BX Connector

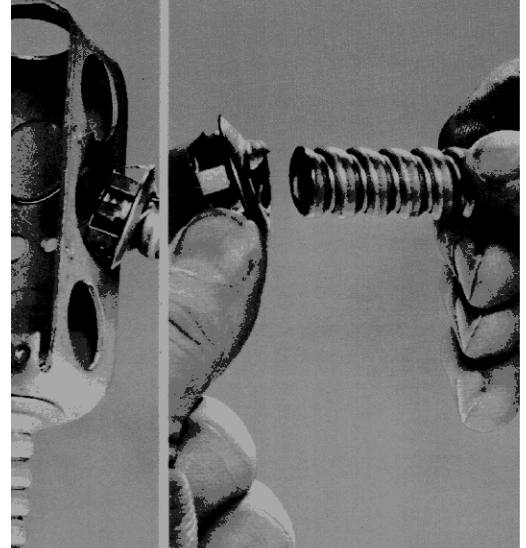

Perfect for Conduit Connections

TWIST ON...SNAP IN!

An inexpensive means to quickly connect flexible metal conduit to junction boxes or Motor Control Panels.

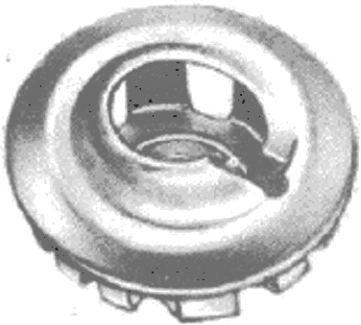

This one-piece inexpensive connector replaces typical connectors, which usually consist of a casting, a nut, a retaining plate and two screws.

The connector requires no tools or fasteners to assemble. It is simply threaded onto flexible metal conduit by hand and then snapped into the knockout hole.

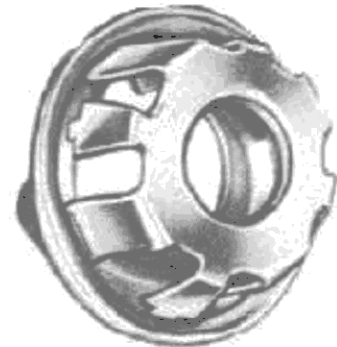

ADVANTAGES

- Connector is quickly snapped into standard 7/8" trade size diameter knock-out hole.
- No nuts to tighten-no tools required. Connector screws onto outside of cable.
- Does not restrict ID and holds plastic insulator firmly in place. Plastic insulator not required per U.L.
- Anti-rotation device retards removal of cable once in place.

COMMON APPLICATIONS

- ✓ Fluorescent light fixtures
- ✓ Incandescent light cans
- ✓ Motors for fans, blowers, and other electrical equipment
- ✓ Junction boxes
- ✓ Control panels
