PowAR™ Grip

INTERNATIONAL
ISO 9001:2008 CERTIFIED

Perfect for Solar and HVAC Applications!

The PowAR Grip is a perfect solution for a secure connection on standing seam roofs. It was designed to make roof assembly installation more efficient. By providing installers with a smarter assembly, the PowAR Grip reduces installation time and labor. The PowAR Grip:

- ◆ Requires one tool, a nut driver
- ◆ Easily snaps into place on the roof seam for easy pre-assembly
- ◆ Eliminates yearly checks of torque value
- ◆ Does not penetrate the roof surface, preserving roof warranty

The Better Solution

Current industry clamps require yearly checks of torque value. This can cause more hassle with additional bolts and nuts, and often requires multiple tools. The PowAR Grip eliminates the need for many of these requirements, speeding up installation by simplifying the overall installation process.

Installation only takes a few steps:

1. Place the necessary number of PowAR Grips onto the roof seam
2. Place PowAR PV Anchor or industry standard strut over the bolts
3. Secure with the supplied nut
4. Attach solar panels directly to the PowAR PV Anchor* or to the strut with use of the PowAR Snap*

**PowAR PV Anchor and PowAR Snap are not required for PowAR Grip to function.*

Applications:

- Solar Assembly
- HVAC Systems
- Piping
- Conduits
- Snow Guards
