## Universal Trim Clip

*Perfect for door panel trim applications!*

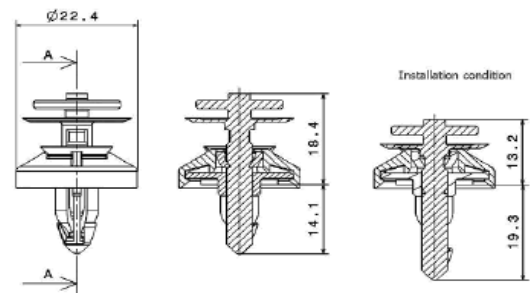

### Features & Benefits:

- Triple Component, recyclable
- Pre assembled for final usage
- Material: POM-C, TPE, PA
- For hole size:  $8.0 + 0.2\text{mm}$
- Panel thickness: 0.8 to 3.0mm
- Insertion force:  $< 40\text{ N}$
- Pull out force:  $> 80\text{ N}$

The universal trim clip is a cost attractive, triple component solution for door panel trim applications. The trim clip is ready to be used in the delivery condition, replacing the old universal trim clip with the same function but made by assembling 5 parts to create a complete assembly. It can be preassembled with several existing retainers or assembled direct into the dog house of the door panel. The trim clip function is in line and comparable with the existing 5 part clip. Trim clips for further hole diameters or applications can be realized on request.

The design allows production in higher cavity tooling. The manufacturing materials are selected and combined to achieve the proper function and to avoid squeak coming from the part itself.
