

Solutions

IDEAL® WeatherProof™ & UnderGround™ Wire Connectors
Tough Connectors for Rough Environments

Take control of the elements with IDEAL® WeatherProof™ and UnderGround™ Wire Connectors

Demanding applications demand higher level solutions. The **new IDEAL® WeatherProof™ and UnderGround™** wire connectors are designed specifically for damp, wet or direct burial electrical connections. Pre-filled with silicone, both connectors come in a complete wire range and meet the rigorous requirements of UL 486D.

The **WeatherProof™ connectors** can be used with confidence in interior and exterior applications where exposure to moisture is likely. Typical applications include exterior lighting, basement/garage circuits, outdoor power outlets, bathroom and spa vent/exhaust fans and any other application in which rain, high humidity or condensation might be a factor.

The **UnderGround™ connectors** can be used without a junction box and in many cases eliminates the need for heat-shrink, resin packs or multi-piece corrosion kits. They're perfect for decorative landscape lighting, lawn sprinkler control systems, sump and well pump installations and many other direct burial applications.

WeatherProof™ Applications

- Exterior area and security lighting
- Outdoor power outlets
- Decorative patio & deck lighting
- Marine shore-power and dock lighting
- Traffic-signal control circuits
- Outdoor signage
- Basement, garage, and car-port circuits
- Bathroom/spa vent fan
- Automatic carwashes
- Industrial hosedown/washdown

Underground™ Applications

- Low-voltage landscape lighting
- Lawn-sprinkler control system
- Sump and well pump installations
- Ejection pumps
- Valve control boxes
- Utility tracer line application

WeatherProof™ & UnderGround™ Wire Connectors are registered and trademarked to IDEAL®
