

DOOR APPLIQUE SPRING STEEL NUT

CHALLENGE

Typical molded clip attachment features (doghouses) were unable to be molded on hard coated polycarbonate door appliques due to sink concerns.

SOLUTION

Developed UHSS clips that could be fastened on thin molded ribs. 1 radial nut and 2 floating w-base/metal clip assy's are used on each of the 6 appliques on all GM K2 full size SUV's.

RESULT

Sourced business on entire K2 truck line. All clips are bowl fed and robotically installed on 100% automated assembly line.
